Section v softball rules

Softball rules and regulations. Softball rules uk. Section v rules. Softball rules.

Some Section V teams are more used to playing Far West Regional round against Section VI's champions than others. Take Webster Thomas, for example. Coach Emily Castro's Titans won their section championship but have never gone further in regionals. In 2005, they lost to a strong Kenmore West team. A few years prior, they fell short to Lancaster in 2001. The Titans' rival, Webster Schroeder, had success winning the Class A state title in 2022. Junior pitcher Maddie Hicks believes her team can make a deep run this spring after their recent wins against Greece Arcadia and Irondequoit. The Titans are eager to continue their momentum from their Section V Class A final win. Other teams, like Friendship/Scio and Wellsville, also return to regionals with hopes of advancing further. Rush-Henrietta coach Lynn Rotola's Royal Comets won their program's first section title and will make their regional debut on Saturday. V Wellsville lost to Depew 5-0 in the Class B Far West Regionals on June 4, 2022. In another game, Wellsville (20-1) faced Iroquois (13-7). The Lions were on a 14-game winning streak before regionals. In the Class A final, Webster Thomas defeated Honeoye Falls-Lima 5-3. Anna Bello hit a homer and Maddie Hicks struck out eight in that game. Winners advance to the NYSPHSAA Softball Championship tournament on June 9 at the Moriches Athletic Complex. Section V Athletics oversees sports programs across 12 counties, including Allegany, Cayuga, Genesee, Livingston, Monroe, Ontario, Orleans, Seneca, Steuben, Wayne, Wyoming, and Yates. They have 125 member schools and manage 28 sports. The NYSPHSAA introduced a "run rule" this season for baseball to end games early if one team is far ahead. However, not all local leagues are using it, and softball has had a 15-run rule for more than 20 years. Some players and coaches prefer the run rule to avoid embarrassing opponents, while others like games to finish normally, giving trailing teams a chance to make a comeback. The softball season has adopted a new 10-run mercy rule, which will end the game after five innings if the home team leads by that amount. However, this rule differs from baseball's version and has sparked debate among coaches. Seven local leagues have adopted the new rule, including the Rochester City Athletic Conference. Monroe County and Finger Lakes leagues opted out, as did some schools with independent schedules. Coaches also provided input on the decision, with some voicing concerns about the impact on player mental health. Meaghan Keil, a veteran coach from Webster Schroeder, believes that 15 runs is too much for the mercy rule margin in softball. She thinks it can be "borderline unsportsmanlike" and that players might struggle to come back from such a large deficit. Barbara Holmacher, whose daughter plays on Greece Athena's team, agrees with Keil's concerns. She believes the 10-run rule can be cruel to players who are already struggling mentally. The NCAA softball rulebook uses an eight-run mercy rule instead. Josh Phillips, whose son plays on the Irondequoit baseball team, has mixed feelings about the new rule in softball. He thinks it can teach valuable life lessons but also raises concerns about player safety and dynamics of the game. With many games being postponed due to weather, a run rule could help reduce wear and tear on pitching staffs, especially for teams with limited arms. think we have an obligation to display good sportsmanship when games are getting out of hand and avoid unnecessary base running or stealing, Irondequoit softball coach Scott Smith said. This is especially true since the game is called "mercy" rule. Personally, I believe that we shouldn't crush a team's spirit if we're winning 20-1," said Irondequoit first baseman Ayana Chodak. "It's better to end the game sooner because it can be tough on the other team. Baseball coach Jeff Amoroso agrees that lopsided games aren't always bad, though. He can give a lot of players at-bats when his team is winning by a large margin. In a mercy rule game, he would've lost some innings and not been able to give everyone a chance to play. The main issue in baseball is getting parents to let their kids play rather than sit on the bench. However, playing time can cause tension among parents, coaches, players, and athletic directors. Some softball coaches opt to play backup players if they're facing an inferior opponent and want to keep the score reasonable. However, unlike possession games like soccer or lacrosse, softball requires constant action since batters must continue to come up to the plate, making it harder to get outs when a team has momentum. According to Hilton softball coach Amy Centola, the game's unique nature makes it challenging to adopt strategies like intentionally striking out to keep the score down. In fact, some coaches prefer to instruct players to bunt or alert umpires that runners will intentionally leave base early, resulting in an automatic out. Irondequoit parent Paul Buckley sees both sides of the issue, noting that while there are valid reasons for ending games early, it's also important to consider fan satisfaction. His daughter Samantha plays softball, and teammate Alyssa Bolcato adds that colder weather conditions can increase the risk of injury if players come off the bench after a long inning. In contrast to baseball, softball is distinct in its requirement for constant action, making it challenging to adopt strategies like intentionally striking out or holding onto the ball without trying to score. The lack of regulation on pitch count for girls' baseball players, unlike in boys' baseball where a limit was implemented by NYSPHSAA last year, allows them to play more games in a week without excessive fatigue. This, however, can lead to lopsided games and decreased focus due to frustration or seeking revenge against opponents who are dominating the score. Coaches, particularly those with limited player rosters, find it challenging to manage their teams' performance under these conditions. For instance, Centola's team, which has only 10 healthy players, often struggled in previous seasons but found solace in the fact that playing more games helped build resilience and motivated them to work harder. The experience of facing tougher competition early in the season prompted Centola's team to put in extra practice time, ultimately leading to an improved performance despite losing several games.
